1 Introduction

You may know the game "Geoguessr", where you get a random location of google streetview and you have to guess where you are, and the closer your guess is the more points you get. Our game has the same idea of guessing a location on a map. Only in our game everyone can upload a picture with a location and an hint. Other people can then guess where the picture is made. They can guess 3 times, every time they lose 20 points and when they ask for an hint they lose half the points.

2 the web application architecture

3 Implemented functionalities

3.1 Google maps
